

CSC 1202 – Final Project Submission & Evidence Guidelines

1 Internship Logging & Evaluation System (ILES)

This document outlines the expectations, evidence requirements, and marking structure for the final Software Development Project. The focus is on demonstrating actual implementation work rather than theoretical or AI-generated content.

2 Key Principle of Assessment

Marks will primarily be awarded based on:

- Functional implementation
- Screenshots of implemented modules
- GitLab contribution evidence
- Deployment evidence
- Testing evidence
- API and workflow evidence

Very low marks will be awarded for:

- Long AI-generated explanations
- Generic theory
- Copied documentation
- Large pasted code blocks
- Reports without implementation screenshots
- Reports without Git evidence

3 Marking Structure (100 Marks)

- Functional Deployed System – 20 Marks
- Module Implementation Evidence – 35 Marks
- GitLab Contributions & Collaboration – 20 Marks (Individual)
- Testing & Debugging Evidence – 10 Marks
- Deployment & DevOps Evidence – 5 Marks
- Technical Design Evidence – 5 Marks
- Reflection & Lessons Learned – 5 Marks (Individual)

4 Functional Deployed System (20 Marks)

Students MUST submit:

- Live URL for the deployed system (Should be active till 31st August 2026)
- Login credentials for testing (For each role: Student, Supervisor, Admin, etc.)
- Evidence that the system is functional

Required screenshots:

- Login page
- Dashboards
- Forms
- Workflow transitions
- Reports
- Notifications
- Role-based views

5 Module Implementation Evidence (35 Marks)

For EVERY module, students MUST provide:

- Screenshots of implemented interfaces
- API/Postman evidence and link.
- Database evidence
- Workflow evidence
- Brief technical explanation

Required Modules:

1. User & Role Management
2. Internship Placement Module
3. Weekly Logbook Module
4. Supervisor Review Workflow
5. Academic Evaluation Module
6. Weighted Score Computation
7. Dashboards & Reporting

6 GitLab Contributions & Collaboration (20 Marks)

Students MUST provide:

- Main repository URL
- Names of all contributors
- GitLab usernames/accounts
- Screenshots of commit history to the main repository

- Screenshots of branches and merge requests
- Individual contribution evidence

Students with little visible contribution may receive lower individual marks.

7 Testing & Debugging Evidence (10 Marks)

Required evidence:

- Screenshots of backend unit test execution (pytest or Django test runner)
- Screenshots of frontend unit test execution (Jest / React Testing Library)
- Screenshots of passed/failed test summaries
- API validation evidence using Postman, Swagger, or DRF browsable API
- Screenshots showing validation errors and successful API responses
- Evidence of debugging and bug fixes:
 - Error screenshots
 - GitLab issues
 - Fix commits
 - Before/after results
- Test coverage reports or terminal output showing completed tests

8 Deployment & DevOps Evidence (5 Marks)

Students MUST include:

- Deployment screenshots
- Hosting evidence
- Environment configuration evidence
- Live URL
- Simple deployment architecture diagram

9 Technical Design Evidence (5 Marks)

Students should include:

- ERD
- Architecture diagram
- Workflow diagram

Avoid long theory explanations.

10 Reflection & Lessons Learned (5 Marks)

Each student should individually explain:

- Technical lessons learned
- Challenges faced
- Problem-solving approaches employed
- Areas for personal improvement

11 Final Submission Checklist

COMPULSORY ITEMS:

- Submission date: 15th June 2026
- PDF document uploaded to MUELE
- Live deployed URL
- GitLab repository URL
- Names of contributors
- GitLab usernames
- Screenshots of implementation
- Screenshots of GitLab contributions
- Screenshots of testing
- API evidence
- Workflow evidence
- Dashboard screenshots
- Reflection by each member
